DETAILED ACTION

Claim Interpretation

Claim 1 refers to an operating mode and a non-operating mode. In the non-operating mode a thrust of the mover is generated. Generating a thrust is an operation. The phrase non-operating is interpreted to mean a mode where the motor is not being used to drive a load. Applicant refers to "... dividing the thrust ... by a DC current" This is interpreted to mean that a number representative of the thrust is divided by a number representative of the current.

Allowable Subject Matter

Claims 1-11 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record does not disclose or teach a linear vibration motor where a thrust is generated in a non-operating mode and that thrust is divided by the DC current supplied to the linear motor in order to control the position of the linear motor as recited in claim 1.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Marra, III et al. 6,747,431 B1, Zalkin et al. 6,525,498 B2, Heller et al. 6,211,634 B1 and Vecchiotti et al. 5,909,018 all teach operating a motor in a test mode in order to obtain information used to control the motor when it is being used to power a load. None of those motors are linear vibration motors. Zalkin et al. is used to measure a torque of the motor, which is equivalent to applicant's thrust, but Zalkin et al. does not teach dividing the thrust by the current applied to the motor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
